FUGRO SURVEY SUCCESSFULLY COMPLETES FIELD OPERATIONS FOR ROYAL AUSTRALIAN NAVY

Fugro Survey Pty Ltd has successfully concluded field operations on a contract for hydrographic surveying services in support of nautical charting for the Royal Australian Navy (RAN) Australian Hydrographic Service (AHS). The survey, which was conducted using Airborne Hydrographic LIDAR, was in support of the Fisheries Protection Survey and Charting Project (FPSCP) and will ultimately enhance the capacity of maritime enforcement vessels to protect and secure Australian waters from incursion by illegal foreign fishing vessels. Field operations commenced in November 2007 and were concluded on schedule in January 2009. Data processing will continue through July 2009.

Over two deployments during this period, Fugro surveyed approximately 6,000km² to IHO Order 1 Standards and reported approximately 200 potential dangers to navigation to the RAN AHS. The survey was extremely constrained by environmental constraints such as weather, water clarity and tides, but during the peak production period, Fugro was surveying to nautical charting standards at a rate of approximately 160 km² per day. Data processing and reporting continues with all deliverables under this contract to be delivered to the RAN later this year.
